

# RapidImpact:

## A scalable route to successful change management

### Realize the benefits of ActiveControl in a matter of weeks

The world's largest organizations have built large, complex SAP estates at the heart of their operations. They are rightly wary of onboarding a software partner that could disrupt, rather than help, this fragile environment.

RapidImpact is the culmination of years of research into how large SAP customers onboard and scale a change management system, providing a clear pathway to deploy specific ActiveControl capabilities at speed to drive immediate business value.

**Standard Workflow** Through powerful automation capabilities, all approvals will be delivered by ActiveControl, always ensuring compliance with governance rules and adhering to best practice

**General Analyzers** A set of nine analyzers including Conflict analysis, Sequencing and Regression capabilities that ensures your transports are fundamentally sound and in the right sequence

**Import Scheduling** A flexible and simple system that enables customers to set up schedules to manage change

**Backout** A true differentiator for ActiveControl, this enables customers to fix any errors that might enter production by 'backing out' of that change without the need for lengthy processes and approvals to fix it

BASIS TECHNOLOGIES IS TRUSTED BY THE WORLD'S BEST-PERFORMING ORGANIZATIONS

For many years now, ActiveControl has delivered huge benefits to SAP customers across a wide range of industries. **Through RapidImpact, these will be realized in weeks.**

Goal	✔ Reducing production errors	✔ Deploying changes at greater speed	✔ Minimizing rework
Measurement	✔ Fall in RC8s (import errors)	✔ Reduction in the number of days from release of transport to deployment	✔ Fewer transports required per change
Business value	✔ Improves quality of solutions, reducing unplanned downtime or the loss of business functionality in the production environment	✔ Increases business agility, faster delivery of new features and fixes and overall alignment with business goals	✔ Lowers operating costs and allows the team to focus on other priorities

## An onboarding schedule backed by years of research

RapidImpact demonstrates how ActiveControl can have a tangible impact on change management processes in a short space of time. After a three-week process of Discovery, Install, Build and Training, the product is Deployed within a selected, single development track. Over the next two months, this is supported by cycles of Continuous Improvement and Benefits Assessments to ensure that value is being gained from the product, before a Playback and Final Evaluation. With the insights that have been gained, ActiveControl can then be effortlessly scaled across the enterprise.
